## ROSS MACDONALD

---

June 19th, 2020

Subject: Software Engineer, Front-End

Attention: AnnaRose Hughes, Head of Talent

It seems too obvious to say just how important remote health care currently is, but I suppose I've just said it anyway. Covid-19 truly has changed the world, and Hims & Hers is ahead of the curve. This would be a great match for both of us; I have full-stack experience, but the front-end is where my passion lies. From cruising around the Hims & Hers websites, I've noticed that both pages are using React. Perfect! I've written multiple applications from scratch using React.

While we're on the topic of how great a fit I am, let's talk about my most recent project. I've published a full-stack web application using React, Node.js and a PostgreSQL database called 'Find Your Park' (<https://findyourpark.netlify.app>). The app allows Californians to find parks using different search methods in tandem with an interactive map. Users can sign up for an account and discuss aspects of the parks via their comments pages. This and other projects I built can be found on my personal portfolio website (<https://ross-scott-macdonald.com>).

I'm a relatively easy-going, laid back individual - that said, I am no stranger to stress, deadlines, and high-stakes outcomes on the job. In my previous career path, I started with zero experience; within a year I was training new employees and within three years was made a supervisor. I powered my way through Bloc.io's web development program while working my regular full-time job. I know I can not only be a part of the team, but in time become a leader.

Thank you for your consideration. I'm excited about the opportunity to contribute to the success of Hims & Hers.

Sincerely yours,  
Ross MacDonald
